

Version 7.6 Beta 1

- Rebased to Ubuntu 22.04
- system-installer
 - The remainder of the back-end was rewritten in Python
 - Added OEM installation capabilities
 - Added installation reporting
 - This is entirely opt-in
 - Re-structured installation confirmation window
 - Reduced package size by including kernel package in the ISO itself
 - should reduce the need to fight with kernel mismatches
 - Added RAID support for the home partition
 - Supported RAID types
 - RAID0
 - RAID1
 - RAID10
 - Using this option makes your home partition a btrfs partition
 - Added checks to reduce likelihood of improper manual partitioning
 - A lot of bug fixes
- drauger-welcome
 - Added ability to install Telegram and/or Discord if they are not already installed, when attempting to get support on those platforms
 - Minor aesthetic improvements
- New GTK theme
 - [Nocturn](#)
- Updated Xfce to Version 4.16
- xfce4-desktop-service
 - lots of bug fixes
 - added functionality
- Improved Live USB GRUB menu
 - made menu options easier to understand
 - removed debugging options
- Added systemd-boot-manager
 - Easier way of managing systemd-boot and kernel stubs

- Provides colorful output to draw attention to important messages
- 100% python
- Created nvidia-driver-latest
 - Keeps your system on the latest Nvidia drivers
 - automatically disables Nouveau
- Fixed steam-login-session
 - Logging into Steam Big Picture Mode now works correctly
 - Logging out may take some time, but does work
- Replaced PulseAudio with PipeWire

Version 7.6 Beta 2

- system-installer
 - switch from using a kernel archive to a pool folder
 - attempts to set default boot option before reboot now
 - fix launcher not being removed from desktop
 - fix BIOS installation
 - allow using preexisting home partitions when using auto partitioner
 - allow making home partition when using auto partitioner
- systemd-boot-manager
 - improve scaling for 4K screens
 - minor bug fixes
- xfce4-desktop-service
 - Add missing functions MoveInto() and DisplayChooserDialog()
 - prevent overwriting of files when creating new ones
 - catch IsADirectoryError when copying files
- removed Rygel
- Added Heroic Game Launcher to repos and installed by default

Version 7.6 Beta 3

- system-installer
 - change default file system to BTRFS
 - allow detection of BTRFS used as partition table
 - bug fixes for OEM install

- systemd-boot-manager
 - bug fixes
 - added support for multi-boot
 - added ability to set general bootloader settings
 - further improve support for HiDPI screens
- Xfce
 - minor changes to apps displayed on left-hand panel
- removed software-properties-gtk and update-manager
 - users should now use Synaptic for updates
- Kernel
 - Switched to in-house compiled kernel
 - Version 5.16.18
- switched to Firefox snap
 - This was intentionally chosen over the flatpak or building the *.deb ourselves
 - auto-updates
 - What most users will likely end up using
 - retains same plug-in support
- drauger-welcome
 - Minor GUI updates
 - new binary in \$PATH
 - in response to the removal of software-properties-gtk, a new "Additional Drivers" menu was made
 - updated the tutorial
 - major code clean-up
